

Culligan® High Efficiency Automatic Water Softener Owners Guide

Attention Culligan Customer

The installation, service and maintenance of this equipment should be rendered by a qualified and trained service technician. Your local independently operated Culligan dealer employs trained service and maintenance personnel who are experienced in the installation, function and repair of Culligan equipment. This publication is written specifically for these individuals and is intended for their use.

We encourage Culligan users to learn about Culligan products, but we believe that product knowledge is best obtained by consulting with your Culligan dealer. Untrained individuals who use this manual assume the risk of any resulting property damage or personal injury.

WARNING! Electrical shock hazard! Prior to servicing equipment, disconnect power supply to prevent electrical shock.

NOTE This system is not intended for use where water is microbiologically unsafe or with water of unknown quality.

WARNING!

WARNING!

If incorrectly installed, operated or maintained, this product can cause severe injury. Those who install, operate, or maintain this product should be trained in its proper use, warned of its dangers, and should read the entire manual before attempting to install, operate, or maintain this product.

This device complies with part 15 of the FCC rules subject to the two following conditions: 1) This device may not cause harmful interference, and 2) This device must accept all interference received including interference that may cause undesired operation.

This equipment complies with Part 15 of the FCC rules. Any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

	CAUTION!	To reduce the risk of fire, use only No. 26 AWG or larger telecommunications line cord.
	CAUTION!	This product is not to be used by children or persons with reduced physical, sensory or mental capabilities, or lack of experience or knowledge, unless they have been given supervision or instruction.
	CAUTION!	Children should be instructed not to play with this appliance.
	CAUTION!	If the power cord from the transformer to the unit looks or becomes damaged, the cord and transformer should be replaced by a Culligan Service Agent or similarly qualified person in order to avoid a hazard.

About this Manual

This manual:

- familiarizes the operator with the equipment
- explains installation and setup procedures
- provides basic programming information
- explains the various modes of operation
- gives specifications and troubleshooting information

Read this Manual First

Before you operate the Culligan High Efficiency Automatic Water Softener, read this manual to become familiar with the device and its capabilities.

Safe Practices

Throughout this manual there are paragraphs set off by special headings.

Notice (or Note) is used to emphasize installation, operation or maintenance information which is important, but does not present any hazard. For example,

NOTICE The nipple must extend no more than 1 inch above the cover plate.

Caution is used when failure to follow directions could result in damage to equipment or property.

Warning is used to indicate a hazard which could cause injury or death if ignored.

WARNING! Electrical shock hazard! Unplug the unit before removing the timer mechanism or cover plates!

The CAUTION and WARNING paragraphs are not meant to cover all possible conditions and situations that may occur. Understand that common sense, caution, and careful attention are conditions which cannot be built into the equipment. These MUST be supplied by the personnel installing, operating, or maintaining the system.

Be sure to check and follow the applicable plumbing codes and ordinances when installing this equipment. Local codes may prohibit the discharge of sanitizing or descaling solutions to drain.

Use protective clothing and proper face or eye protection equipment when handling chemicals or tools.

NOTE The Culligan High Efficiency Softener is not intended for use with water that is microbiologically unsafe or of unknown quality without adequate disinfection either before or after the system.

NOTE Check with your public works department for applicable local plumbing and sanitation codes. Follow local codes if they differ from the standards used in this manual. To ensure proper and efficient operation of the Culligan High Efficiency Filter to your full satisfaction, carefully follow the instructions in this manual.

Welcome To Your New World of Better Living with Culligan Water.

The Culligan HE Water Softeners with Soft-Minder[®] Meter and Aqua-Sensor[®] sensing device are tested and certfied by WQA against NSF/ANSI Standard 372, CSA B483.1, and NSF/ANSI Standard 44 for the effective reduction of hardness (calcium and magnesium), barium, and radium 226/228, as verified and substantiated by test data.

The Culligan HE Municipal Water Softeners are tested and certified by WQA against NSF/ANSI Standard 372, CSA B483.1, and NSF/ANSI Standard 44 for the effective **C** reduction of bardness (calcium and magnesium), and NSE (ANSI Standard 42 for the effective

reduction of hardness (calcium and magnesium), and NSF/ANSI Standard 42 for the effective reduction of Chlorine Taste and Odor, as verified and substantiated by test data.

The Culligan HE Water Softener Outdoor Controller Enclosure complies with the UL 50/50E and UL 746C standards for a NEMA 3R Enclosure Rating.

For installations in Massachusetts, Massachusetts Plumbing Code 248 CMR shall be adhered to. Consult your licensed plumber for installation of this system. This system and its installation must comply with state and local regulations. The use of saddle valves is not permitted.

If this is your first experience having soft, conditioned water in your home, you'll be amazed at the marvelous difference it makes. We promise that you'll never want to be without it again.

Congratulations, too, on selecting one of the "first family" of water conditioners in the prestigious Culligan High Efficiency Water Softeners. With Culligan's many years of knowledge and experience in water treatment, you can be confident that the model you selected has been designed and engineered to provide years of service with a minimum of care and attention.

Some localities have corrosive water. A water softener cannot correct this problem and so its printed warranty disclaims liability for corrosion of plumbing lines, fixtures or appliances. If you suspect corrosion, your Culligan Dealer has equipment to control the problem.

NOTICE Sodium Information: Water softeners using sodium chloride for regeneration add sodium to the water. Persons who are on sodium restricted diets should consider the added sodium as part of their overall sodium intake.

Serial Numbers

The control valve serial number is located on the back of the timer case.

The media tank serial number is located on the top surface of the tank.

NOTE DO NOT remove or destroy the serial number. It must be referenced on request for warranty repair or replacement.

Thank You

It's All So Easy, So Economical, So Efficient, So Enjoyable!

Kind To Skin And Complexion

Soft water will help prevent red, itchy or dry skin because there are no hardness impurities to cause soreness, no soap curd to coat the skin. Shaving is easier, smoother—either with a blade or electric shaver.

Bathing And Showering

You'll use far less soap with conditioned water. Use your soap very sparingly—not as you did before soft water. Just a quick rinse removes all lather, leaving your skin pleasantly smooth and silky because now it's free of sticky soap curd and film.

Saves Washing Costs. Helps Control Environmental Pollution

Soft water washes whiter and cleaner with less soap or detergent. Because the hardness impurities are removed, your soap can concentrate solely on washing. People usually find that they can reduce the amount of soap they use substantially. If you normally use a cup per wash load with hard water, try using 1/3 cup depending on the size of your wash load and the degree of soil. Different amounts are required, but you can use less with softened water. An added bonus is the fact that your washable fabrics will last longer.

Super Hair Conditioning

Soft water is great for scalp and hair care. No insoluble deposits are formed. Hair is shinier, softer, more manageable. Reduce the amount of shampoo you have normally used.

Dishes Are A Delight

Washed by hand or in a dishwasher, glassware, dishes and silver wash cleaner, easier. Follow your dishwasher manufacturer's instructions. Soft water promotes sanitation because no greasy hard water film can form to collect or harbor bacteria.

Easier Housekeeping, Gleaming Fixtures

You'll be amazed at the marvelous difference. Just a swish of the cloth, and the bathtub or shower and fixtures are clean and sparkling. Imagine, no scouring! No hard water scum to cause rings, streaks, spots and stains. To keep their gleaming luster, simply wipe fixtures with a towel after use. Formica, tile, walls, floors, woodwork surfaces clean easier, stay clean longer. You'll save on cleaning aids and save on time.

Saves Water-Heating Energy, Helps Water-Using Appliances

Soft water reduces the formation of rock-like hard water scale that encrusts water heaters, hot water pipes, shower heads, and water-using appliances. This scale can cause premature maintenance and failure.

Elimination of hard water also provides substantial energy savings because scale acts as an insulator, wasting electricity or gas used to heat water.

Water For Lawns And Household Plants

If possible, lawn sprinkling faucets should be supplied with hard water primarily because it is uneconomical to soften so much water.

Household plants are much more sensitive than lawns with respect to the kind of water which is best. First, because they receive no rainfall and, second, there is little or no drainage of the soil. Preferably they should be watered with rainwater or water which is low in mineral content such as distilled or demineralized water. Softened water is not recommended for house plants because a build-up of sodium in the soil may interfere with efficient absorption of water by the plant root system. Additional information may be obtained from your independently operated Culligan dealer.

Culligan Municipal Softener

With the Culligan Municipal softener you will experience the above benifits in addition to the reduction of chlorine taste and odor for a fresh, clean taste and smell.

Introduction

How Your Water Conditioner Works

Why Water Gets Hard And How It Is Softened

All of the fresh water in the world originally falls as rain, snow, or sleet. Surface water is drawn upward by the sun, forming clouds. Then, nearly pure and soft as it starts to fall, it begins to collect impurities as it passes through smog and dust-laden atmosphere. And as it seeps through soil and rocks it gathers hardness, rust, acid, unpleasant tastes and odors.

Water hardness is caused primarily by limestone dissolved from the earth by rainwater. Because of this, in earlier times people who wanted soft water collected rainwater from roofs in rain barrels and cisterns before it picked up hardness from the earth.

Some localities have corrosive water. A softener cannot correct this problem and so its printed warranty disclaims liability for corrosion of plumbing lines, fixtures or appliances. If you suspect corrosion, your Culligan Man has equipment to control the problem.

Iron is a common water problem. The chemical/physical nature of iron found in natural water supplies is exhibited in four general types:

- Dissolved Iron Also called ferrous or "clear water" iron. This type of iron can be removed from the water by the same ion exchange principle that removes the hardness elements, calcium and magnesium. Dissolved iron is soluble in water and is detected by taking a sample of the water to be treated in a clear glass. The water in the glass is initially clear, but on standing exposed to the air, it may gradually turn cloudy or colored as it oxidizes.
- Particulate Iron-Also called ferric or colloidal iron. This type of iron is an undissolved particle of iron. A softener will remove larger particles, but they may not be washed out in regeneration effectively and will eventually foul the ion exchange resin. A filtering treatment will be required to remove this type of iron.
- 3. **Organic Bound Iron**—This type of iron is strongly attached to an organic compound in the water. The ion exchange process alone cannot break this attachment and the softener will not remove this type of iron.
- 4. **Bacterial Iron**—This type of iron is protected inside a bacteria cell. Like the organic bound iron, it is not removed by a water softener.

When using a softener to remove both hardness and dissolved iron it is important that it regenerates more frequently than ordinarily would be calculated for hardness removal alone. Although many factors and formulas have been used to determine this frequency, it is recommended that the softener be regenerated when it has reached 50–75% of the calculated hardness alone capacity. This will minimize the potential for bed fouling. (Iron removal claims have not been verified by the Water Quality Association.)

If you are operating a water softener on clear water iron, regular resin bed cleaning is needed to keep the bed from coating with iron. Even when operating a softener on water with less than the maximum of dissolved iron, regular cleanings should be performed. Clean every six months or more often if iron appears in your conditioned water supply. Use resin bed cleaning compounds carefully following the directions on the container.

CAUTION! Do not use where the water is microbiologically unsafe or with water of unknown quality without adequate disinfection before or after the unit.

Your Culligan water conditioner consists of three basic components, (A) the Control Valve, (B) the Mineral Tank, and (C) the Brine System.

A. Control Valve

The exclusive Culligan control valve automatically performs a variety of tasks that are necessary for the proper operation of your water conditioner. These tasks, commonly referred to as cycles or operating positions, are **Service, Regeneration,** and **Brine Refill**.

 Service: While the control valve is in the service cycle, hard water is directed down through the column of Cullex[®] resin where hardness minerals are removed from the water. The softened water is then directed into your household plumbing lines. The ability of the Cullex resin to remove hardness minerals needs to be periodically replenished; this is referred to as ...

2. **Regeneration:** While the control valve is in the regeneration cycle, water is first directed up the value of Cullav rasis to fluch

up through the column of Cullex resin to flush accumulated sediment out of the resin and down the drain. Then, the regenerant brine solution is slowly drawn from the bottom of the salt storage tank of the Brine System and is directed down through the column of Cullex resin, restoring the ability of the resin to remove hardness minerals from your water supply. Once completed, the regeneration cycle is followed by ...

3. **Brine Refill:** While the control valve is in the brine refill cycle, a predetermined amount of water is directed to the salt storage tank of the Brine System so that additional salt can be dissolved to provide the brine solution that will be needed for the next regeneration cycle.

B. The Mineral Tank

The Mineral Tank contains the Cullex resin column, Cullsan[®] underbedding, and an outlet manifold (the Culligan Municipal also includes carbon media for chlorine taste & odor reduction). The number of gallons of hard water that can be softened by the Cullex resin column before it needs regeneration is called the "capacity" of the resin column, and depends upon the amount of hardness minerals in each gallon of water (expressed as grains per gallon) and upon the amount of regenerant brine solution (expressed as pounds of salt) passed through the resin column during regeneration.

Your Culligan service person, taking into account the hardness of your water and the amount of softened water your household may reasonably expect to use each day, has carefully established how often the softener will regenerate and how much salt will be used for each regeneration. This will ensure that all of your soft water needs will be fulfilled without using an excessive amount of salt.

C. The Brine System

The Brine System consists of a salt storage container and hydraulic Dubl-Safe[™] valve. The salt storage container holds the salt that is used to make the regenerant brine solution. The hydraulic Dubl-Safe valve limits the amount of water that is returned to the salt storage tank during the brine refill cycle.

Because a predetermined amount of salt is dissolved with each brine refill cycle, the salt must be periodically replenished in order to maintain efficient operation. Your Culligan service person will be able to tell you about how often salt must be added to the salt storage container.

The Culligan Process

Modes of Operation

Water Meter Mode

In water meter mode, the controller keeps track of the quantity of water that has flowed through the resin bed. Based on the influent water hardness and the hardness capacity of the resin bed, a service life expectancy in the quantity of softened water is calculated and programmed into the control. When the set point is reached, regeneration is triggered. If the predict mode is not selected the regeneration will start at time of regeneration. In immediate mode the regeneration starts as soon as the regeneration signal is provided. If time clock backup is set and the capacity has not been exhausted but the days since last regen is greater than time clock backup, setting the softener will immediately regenerate.

Aqua-Sensor® Mode

The Aqua-Sensor is a conductivity probe that senses when the hardness front passes through the resin bed. It functions independently of the influent water hardness so therefore, is useful in conditions when the influent water hardness varies throughout the year. It provides for the most efficient mode of operation. In addition to sensing when a resin bed is exhausted, it can also be used to determine when the brine solution is rinsed from the resin bed during the Brine Draw/Slow Rinse cycle triggering the control to move to fast rinse. This patented feature provides water savings by optimizing the amount of rinse water required to completely rinse out the resin bed.

Smart Brine Tank Probe

The smart brine tank probe monitors conditions inside the brine tank. It predicts when salt needs to be added to the brine tank, detects the presence of salt-bridging, eductor line plugging and brine tank overfilling.

Wireless Remote Control

The wireless remote control displays the current status of the water softener or filters and allows for remote control. It can be located up to 200 feet away from the softener (depending upon building construction materials). The wireless remote displays information about softener performance, problems, days of salt remaining and allows remote control for regeneration.

The wireless remote control is designed to communicate at 915 MHz and to work without interference with other 915 MHz devices such as cordless telephones and baby monitors.

Modem

The modem allows for the system to be remotely monitored detecting problems before they occur, to schedule salt delivery when it is needed and to keep the system software up to date with the latest advances.

Manual Regeneration

Manual regeneration can be initiated via the softener control valve or wireless remote display. Manual regeneration can be initiated to begin regeneration immediately or that night. To immediately initiate regeneration, press and hold \checkmark for at least ten (10) seconds. To cancel a delayed regeneration, press and hold \checkmark for at least ten (10) seconds.

Predict Mode

The Predict Mode is used with the flow meter to determine the optimum regeneration point. Before the regeneration starts, the control will compare the remaining capacity value with the average daily water use. If the average daily water usage is less than the reserve capacity, the controller will wait 24 more hours before regeneration. If the reserve capacity is less than the average daily water usage, the control will initiate regeneration. This works in delay mode only. At any time, if the total capacity value is reached, the control will initiate an immediate regeneration.

Pre-Rinse Mode

The Pre-rinse mode is used to pre-rinse the softener resin bed or filter media. The pre-rinse in flow meter mode will occur after the control has sensed that no water has flowed through the control for a period of X hours (can be set through the programming menu). When the control is in this mode, once the X amount

of hours have elapsed the control will cycle to the fast rinse position for the pre-set length of minutes and then return to the home or service position.

Down Flow Regeneration

Water and regenerate flow downward through the media tank.

Up Flow Regeneration

Water flow is downward and regenerate flow is upward through the media tank. The significance of this is that regeneration will be most effective in those parts of the resin bed which are treated with the freshest regenerate solution. There will tend to be less hardness leakage with up-flow regeneration.

Proportional Brining

The control monitors your softened water usage making only enough brine to regenerate that part of the resin bed that has been exhausted. In this way the amount of salt used relates directly to the amount of softened water used, making it more efficient and cost effective. Proportional brining can only be used with upflow regeneration. The Aqua-Sensor or meter can be used to initiate a regeneration.

Dial-A-Softness®

Dial-A-Softness is a manual adjustment built into the control valve that allows for variable hardness bypass into the softened water. The hard water bypass can be adjusted from 0% to 30%. The Dial-A-Softness also increases the softener capacity in proportion to the percent hard water bypass (less salt used).

Installation

NOTE Read this section entirely before starting the installation. Follow all applicable plumbing and electrical codes.

Component Description

The water conditioner is shipped from the factory in a minimum of three cartons. With the exception of media containers, remove all components from their cartons and inspect them before starting installation.

Control Valve Assembly

Includes the control valve, bypass valve, and meter. Small parts packages will contain additional installation hardware, and the conditioner Owner's Guide.

Media Tank

Includes Quadra-Hull[™] media tank complete with Cullex[®] ion exchange resin, underbedding and outlet manifold (12″ and 14″ tanks are shipped without media).

Salt Storage Tank Assembly

Includes salt storage container with support plate and Dubl-Safe™ brine refill valve and chamber.

Tools and Materials

The following tools and supplies will be needed, depending on installation method.

NOTE Check and comply with your state and local codes. You must follow these guidelines.

For installations in Massachusetts, Massachusetts Plumbing Code 248 CMR shall be adhered to. Consult your licensed plumber for installation of this system. This system and its installation must comply with state and local regulations. The use of saddle valves is not permitted.

All Installations

- Safety glasses
- Phillips screwdrivers, small and medium tip.
- Gauge assembly (PN 00304450 or equivalent)
- Silicone lubricant (PN 00471507 or equivalent) Do Not Use Petroleum-Based Lubricants
- A bucket, preferably light-colored
- Towels

Special Tools

- Torch, solder and flux for sweat copper connections
- Use only lead-free solder and flux for all sweat-solder connections as required by state and federal codes.
- Threading tools, pipe wrenches and thread sealer for threaded connections.
- Saw, solvent and cement for plastic pipe connections.

Materials

- Brine line, 3/8" (PN 01009819 or equivalent)
- Drain line, 1/2" (PN 00303082, gray, semi-flexible; PN 00331946, black, semi-rigid; or equivalent)
- Thread sealing tape
- Pressure reducing valve (if pressure exceeds 125 psi [860 kPa])
- Pipe and fittings suited to the type of installation
- Water softener salt (rock, solar or pellet salt formulated specifically for water softeners)

Application

Water Quality

Verify that raw water hardness and iron are within limits. Note the hardness for setting the salt dosage and recharge frequency.

Iron is a common water problem. The chemical/physical nature of iron found in natural water supplies is exhibited in four general types: Dissolved Iron, Particulate Iron, Organic Bound Iron and Bacterial Iron. Hardness sample kits are available through your local Culligan dealer.

Pressure

If pressure exceeds 125 psi (860 kPa), install a pressure reducing valve (see materials checklist). On private water systems, make sure the minimum pressure (the pressure at which the pump starts) is greater than 20 psi (140 kPa). Adjust the pressure switch if necessary.

CAUTION! Do not use where the water is microbiologically unsafe or with water of unknown quality adequate disinfection before or after the unit.

CAUTION! The use of a pressure reducing valve may limit the flow of water in the household.

Temperature

Do not install the unit where it might freeze, or next to a water heater or furnace or in direct sunlight. Outdoor installation is not recommended, and voids the warranty. Use the Culligan Outdoor HE softener for outdoor installations. The Culligan Outdoor HE softener has been certified by Underwriter's Laboratories for outdoor installation. If installing in an outside location, you must take the steps necessary to assure the softener installation plumbing, wiring, etc. Areas well protected from the elements (sunlight, rain, wind, heat, cold), contamination, vandalism, etc. as when installed indoors.

Location

Space Requirements

Allow 6–12 inches (15–30 cm) behind the unit for plumbing and drain lines and 4 feet (1.3 meters) above for service access and filling the salt container.

Floor Surface

Choose an area with solid, level floor free of bumps or irregularities. Bumps, cracks, stones and other irregularities can cause the salt storage tank bottom to crack when filled with salt and water.

Drain Facilities

Choose a nearby drain that can handle the rated drain flow (floor drain, sink or stand pipe). Refer to Table 3 "Height of Discharge Above Floor Level Operating." on page 22, for maximum drain line length.

NOTE Most codes require an anti-siphon device or air gap. Observe all local plumbing codes and drain restrictions. The system and installation must comply with all state and local laws and regulations.

Electrical Facilities

A 10-foot cord and wall mount plug-in transformer are provided. The customer should provide a receptacle, preferably one not controlled by a switch that can be turned off accidentally. Observe local electrical codes.

NOTE The softener works on 24 Volt/60 Hz electrical power only. Be sure to use the included transformer. Be sure the electrical outlet and transformer are in an inside location to protect from moisture. Properly ground to conform with all governing codes and ordinances. Observe all local plumbing codes and drain restrictions. The system and installation must comply with all state and local laws and regulations.

NOTE PN 01020620 and PN 01018133 plug-in transformer are rated for indoor installations only.

Placement

NOTE Read this section entirely before starting the installation. Follow all applicable plumbing and electrical codes.

Refer to Figure 1 for system placement.

- 1. With the exception of media containers, open the remaining containers, remove all the components, and inspect them before starting installation.
- 2. Set the media tank on a solid, level surface near water, drain and electrical facilities.
- 3. Set the brine system on a flat, smooth, solid surface as near the media tank as possible.

Tank Assembly

9" and 10" tanks are filled with media at the factory.

1. Before the unit can be connected to the plumbing, you must insert the manifold and load the media into the tank for 12" and 14" units.

CAUTION! Do not lay the tank down unless a suitable lifting device is available. Personal injury and damage to the unit can result if dropped.

Position the Mineral Tank(s)

Determine the location for the mineral tanks(s) prior to loading, because they will be difficult to move after the underbedding and gravel are loaded.

Install Aqua-Sensor

1. Measure the sensor cable length as shown in dimension Y. See Figure 2 and Table 1 (the Aqua-Sensor cord is set at the factory for a 9" tank).

Tank Model	Dimension Y
9" Quadra-Hull™ Tank	40"
10" Quadra-Hull Tank	44"
12" Quadra-Hull Tank	42"
14" Quadra-Hull Tank	52"

Table 1. HE cable lengths.

- 2. Loosen the small Aqua-Sensor Plug; a needle-nose pliers works best. See Figure 3.
- 3. Moisten the cable sheath and slide the cable grip up or down to the proper cable length.
- 4. Tighten the small Aqua-Sensor plug so that the fitting cannot slide along the cable.

NOTE There must be no kinks or bends in the cable.

Insert the probe and cable through the Aqua-Sensor port.
 Tighten the Aqua-Sensor plug into the Aqua-Sensor port.

Aqua-Ser Plug

NOTE The media tank must be backwashed so that the Aqua-Sensor probe can fall into the proper position. See "Recommended Aqua-Sensor® Start-Up

Mount the Control Valve

Procedure" on page 40.

See Figure 4 for an illustration on mounting the control valve to the tank.

- 1. Assemble the O-rings, located in the parts pack, to the tank adapter.
- 2. The valve adapter O-ring sits on the first step on the adapter. See Figure 5.

NOTE Do not push the top O-ring down to the flange surface on the adapter.

- NOTE The larger of the two O-rings in the parts should be positioned between the adapter and the valve. Do not stretch the smaller O-ring onto the top of the tank adapter.
 - 3. Lubricate only the top o-ring on the tank adapter and the outlet manifold O-ring with silicone lubricant.
 - 4. Screw the adapter into the tank until the adapter bottoms out on the tank flange.

NOTE The adapter only needs to be tightened hand-tight to the tank flange.

5. Align the manifold with the center opening in the valve, and firmly press the valve onto the adapter.

NOTE Make sure to push the valve straight down onto the manifold. If the valve is cocked, it may cause the O-ring to slip off the manifold.

6. Assemble the tank clamp to the control, and tighten the clamp screw.

NOTE The clamp and valve will be able to rotate on the tank until pressure is applied.

Figure 4. Mounting the control valve.

Backwash Flow Control, Eductor Nozzle-Throat

Use the recommended backwash flow control, eductor nozzle, and eductor throat for various size tanks. See Table 2.

Refer to Figure 6 through Figure 9 and instructions below for changing the backwash flow control, eductor nozzle, and eductor throat.

Unit	Backwash Flow	Nozzle	Throat	Brine Refill Flow
9" Upflow	2.5–3.1 gpm (#2 Brown)*	Blue*	Gray*	0.45 gpm
10" Upflow	2.5–3.1 gpm (#2 Brown)*	Blue	White	0.45 gpm
9" Downflow	2.5–3.1 gpm (#2 Brown)*	Blue*	Light Brown*	0.45 gpm
10" Downflow	2.5–3.1 gpm (#2 Brown)*	Beige	Light Brown	0.45 gpm
12" Downflow	3.0–3.2 gpm (#3 Green)	Beige	Light Brown	0.8 gpm
14" Downflow	5.3 gpm (Black)	Green	Blue	0.8 gpm
* Shipped assembled inside the control standard from factory				

Table 2. Flow Restrictors.

NOTE For upflow models, the backwash and fast rinse default times are set at five (5) minutes.

Eductor Nozzle and Throat Replacement

Refer to Figure 6 and the instructions below when changing the eductor nozzle and throat.

- 1. Remove the eductor cap clip.
- 2. Remove the eductor cap.
- 3. Remove the eductor assembly.
- 4. Remove the eductor screen from the assembly
- 5. Remove the blue nozzle and replace it with the correct nozzle. See Table 2.
- 6. Make sure to put the O-ring on the nozzle.
- 7. Replace the eductor throat if required.
- 8. Reverse the procedure to reassemble.

Figure 6. Removing the eductor nozzle and throat.

Backwash Flow Control Replacement

Refer to Figure 7 through Figure 9, Table 2, and instructions below to replace the backwash flow control.

- Remove the cover by releasing the cover fastener from the control valve. See Figure 7 and Figure 8.
- 2. Remove the drain clip and pull the drain elbow straight off. See Figure 9.
- 3. Remove the backwash flow control located behind the elbow.
- 4. Install the correct backwash flow control. See Table 2.
- 5. Reverse the procedure to reassemble.

NOTE The number on the flow control should face into the valve body.

NOTE Do not re-install the cover until the drain line tubing is connected.

Attaching the Cover

Once the drain and brine line is connected, re-attach the cover.

- 1. Insert the two pins on the top of the cover into the two holes on top of the frame; the cover should be slightly angled. See Figure 10.
- 2. Rotate the cover downward inserting the two pins on the side of the cover into the two holes on side of the frame. See Figure 11.
- 3. Attach the cover fastener onto the control valve. See Figure 12.

Figure 12. Reattaching the cover fastener.

Dial-a-Softness

Dial-a-Softness is a manual adjustment built into the control valve that allows for variable hardness bypass into the softened water. The hard water bypass can be adjusted to produce 1–3 gpg hardness bleed. Shipped from the factory the Dial-a-Softness knob is set to the "SOFTEST" position (no hard water bypass). See Figure 13.

To set the Dial-a-Softness:

1. Locate the Dial-a-Softness knob on the control valve.

 Set the Dial-a-Softness knob to position A, B, or C as outlined in the table below, based on raw water hardness; this should produce a 1–3 gpg hardness bleed.

Letter on Dial-a-Softness Knob	1–3 gpg Hardness Bleed
SOFTEST	0
A	Greater than 20 gpg
В	Between 10–20 gpg
С	Less than 10 gpg

NOTE The HE must take into account the adjusted capacity if the Dial-a-Softness was changed. See Advanced System Setup to update the Dial-a-Softness setting.

Plumbing Connections

Shipped with each softener is a Culligan[®] bypass valve, which is used to connect the softener to the plumbing system. The bypass allows the softener to be isolated from the water service line if service is necessary while still providing water to the home. The bypass valve can be directly plumbed into the system, or can be connected with the following optional sweat connection kits.

- P/N 01010783 1" Sweat Copper Adapter Kit
- P/N 01016564 3/4" Sweat Copper Adapter Kit
- P/N 01016565 3/4" Elbow Sweat Copper Adapter Kit
- P/N P1018757 1" NPT Plastic Elbow Adapter Kit
- P/N P1018758 1" NPT Plastic Installation Kit

CAUTION! Close the inlet supply line and relieve the system pressure before cutting into the plumbing! Flooding could result if not done!

CAUTION! When making sweat connections, use care to keep heat away from the plastic nuts used to connect the plumbing to the bypass. Damage to these components might result otherwise.

Bypass Valve Installation

Refer to Figure 14 and the instructions below to connect the meter, bypass valve, and interconnecting pipe.

- All HE units are equipped with a Soft-Minder[®] meter. The meter is installed on the outlet side of the control valve. The meter body fits in the same space as the coupling between the control valve and the bypass. Make sure the arrow on the flow meter is pointing in the direction of the flow.
- 2. The bypass valve connects directly to the control valve with the meter and coupling and two assembly pins. Lubricate all O-rings on the couplings/meter with silicone lubricant.

Figure 15. Turn blue bypass knob clockwise.

Figure 16. Turn bypass knob counter-clockwise.

Drain Line Connection

Refer to Table 3 for drain line length and height limitations under the applicable tank size.

- 1. Remove 1/2" pipe clamp from the small parts pack included with the control.
- 2. Route a length of 1/2'' drain line from the drain elbow to the drain.
- 3. Fasten the drain line to the elbow with the clamp.
- 4. Secure the drain line to prevent its movement during regeneration. When discharging into a sink, or open floor drain, a loop in the end of the tube will keep it filled with water and will reduce splashing at the beginning of each regeneration.

NOTE Waste connections or drain outlets shall be designed and constructed to provide for connection to the sanitary waste system through an air gap of two pipe diameters or 1 inch, whichever is larger.

NOTE Note: Observe all plumbing codes. Most codes require an anti-siphon device or air gap at the discharge point. The system and installation must comply with state and local laws and regulations.

Operating Pressure	0 ft (0 m)	2 ft (0.6 m)	4 ft (1.2 m)	6 ft (1.8 m)	8 ft (2.4 m)	10 ft (3 m)
30 psi (210 kPa)	60 ft (18 m)	50 ft (15 m)	30 ft (9 m)	15 ft (5 m)	Not allowable	Not allowable
40 psi (279 kPa)	100 ft (30 m)	90 ft (27 m)	70 ft (21 m)	50 ft (15 m)	30 ft (9 m)	12 ft (4 m)

Table 3. Height of Discharge Above Floor Level Operating.

Connect the Brine Line

- Measure a length of brine line sufficient to reach from the brine tank to the brine fitting, with no sharp bends. For easier access to the float it is recommended to add an extra four feet (1.3 meters) of length to the brine line.
- 2. Cut both ends of the brine line squarely and cleanly.
- Slip the white nut over one end of the tubing and press the plastic insert into the end of the tubing (Figure 17). Connect to the brine valve and tighten nut.

- 4. Remove white nut and plastic insert from the small parts pack.
- 5. Slip the white nut over one end of the tubing and press the plastic insert into the end of the tubing (Figure 17). Connect to the brine connection on the valve and tighten nut.

Fill The Salt Storage Container

Fill the salt storage container with water until the level reaches about 1 inch above the salt support plate. Pour salt into the container. Fill with salt to within a few inches of the top.

Brine Valve "A" Dimension

The brine valve contains a brine float which can serve as a backup refill shutoff in the event of a failure, such as a power outage when in the refill position. The float level should be set based on the salt dosage setting. Refer to Figure 18.

- 1. Remove nut retaining brine valve to brine chamber.
- 2. Lift the brine valve from the brine chamber.
- 3. Find the correct "A" dimension from Appendix A in the HE Softener Installation/Operation manual (PN 01021606).
- 4. Set the distance from the top of the filter screen to the base of the float accordingly. The slight difference in height when the float is pulled up or down is negligible.
- 5. Re-install into brine chamber and replace nut.

Figure 18. Brine valve "A" dimension.

Circuit Board Connections

The 24 Volt power supply and flow meter wire harness is already connected to the circuit board. If no other circuit board connections are required proceed to the First Time Setup. Refer to the instructions below and Figure 19 to Figure 22 for connecting the Aqua-Sensor probe wire harness to the circuit board.

- 3. Grip the circuit board from the edges and gently rotate it to the back of the enclosure (you are disengaging the circuit board from the two support pins on the bottom of the enclosure).
- 4. Remove the circuit board from the enclosure. See Figure 21.
- 5. Remove the plastic plugs from the enclosure.

- 6. Locate the Aqua-Sensor 2.5 VAC power cord packed in the small parts pack. It has two spade terminals on one end of the cable and two metal slip-in tabs on the other end.
- 7. Insert the Aqua-Sensor 2.5 VAC power cord through the third hole on the enclosure. Insert the Aqua-Sensor sensor probe wire harness through the forth hole on the enclosure. See Figure 19.

NOTE If additional accessories are to be connected to the circuit board (such as the Smart Brine Tank Probe or a phone line for modem) insert both the Aqua-Sensor 2.5 Volt power supply wire harness and the Aqua-Sensor sensor probe wire harness through the third hole on the enclosure.

8. Connect Aqua-Sensor probe wire harness to the circuit board. The Aqua-Sensor probe terminal is labeled "Aqua-Sensor." See Figure 22.

NOTE The wire connectors must be connected to the circuit board properly. The wires must exit the plug-in connector opposite of the raised white base of the circuit board connector. Failure to properly connect any of the connectors will result in a malfunction of the circuit board operation.

Figure 20. Circuit board power supply.

Figure 21. Circuit board removal.

- 9. Install the Aqua-Sensor 2.5 volt power cord.
 - a. The power connection to the circuit board should be INSIDE the controller. The spade terminals should be connected to the transformer.
 - b. Discard the dummy connector on the 2.5VAC circuit board pins.
 - c. Connect the Aqua-Sensor power coard to the 2.5VAC pins on the circuit board.
 - d. Connect the other end of the power cord, with the spade terminals, to the two 2.5 VAC terminals on the transformer. See Figure 22.
- 10. Pull any excess cable wire out of the enclosure and route the wiring inside the enclosure to avoid interference.
- 11. Insert the circuit board back into the enclosure.
 - a. Angle the circuit board opposite the front enclosure and into the support bracket on the side of the enclosure.
 - b. Gently push down and rotate forward until you hear a click (the pins on the bottom of the enclosure being inserted into the circuit board).

c. Check to make sure the circuit board is rigidly fastened.

- a. Align the circuit board in the enclosure with the three support brackets on the control valve frame. See Figure 23.
- b. Push the enclosure onto the control valve, inserting the circuit board edge in the slots on the control valve frame and the screw on the enclosure with the hole on the cover.

Figure 23. Attaching enclosure cover to control valve.

- c. Screw the enclosure on the control.
- d. Attach the strain relief fittings to the Aqua-Sensor probe and 2.5 VAC power cord and insert into the enclosure.
- e. Connect the 24 V power cord to the two 24 V terminals on the transformer.

Navigating the Menus and Keypad

Standard Manual Regeneration

Screen Display	Range		Setting Description
SOFTENING JAN-01-12 12:01P	N/A	1.	From the HOME screen, press L to view the main menu.
1)INFORMATION >2)MANUAL MODE	1–6	2.	The screen displays the main menu. Press 👽 🗹 to se- lect 2)MANUAL MODE.
MANUAL MODE >REGEN NOW	Regen Off Regen Now Regen Tonite Bypass	3.	The screen displays the manual regeneration menu. Press and then and the manual regeneration menu. Press and the manual regeneration menu. REGEN NOW is the default. REGEN OFF specifies the softener will not regenerate. REGEN TONITE specifies that the softener will regener- ate that night at 2:00 a.m. (or at the preset regeneration time). The screen displays two status messages: SOFT- ENING and REGEN TONITE. BYPASS specifies a preset softener bypass time. Press to select the total time the softener is in the bypass state.
MANUAL BYPASS OFF	Off, 30, 60, 90, 120, 180, Manual Bypass	4.	The screen displays the manual bypass duration, in min- utes. This specifies the total time the softener is to be in the bypass state. Press I or and then I to change the setting.
SOFTENING JAN-01-12 12:01P	N/A	5.	Press 🗙 🗙 to display the home screen.

Recommended Meter Start-Up Procedure 1. Close the main water supply valve. Set the Cul-Flo-Valv® to the bypass position. 2. 3. Ensure that all faucets at the installation site are closed. Direct the drain line discharge into a bucket where flow can be observed. 4. Plug the transformer into a 120 Volt, 60 Hz, single-phase receptacle. The screen displays FIRST 5. TIME SETUP. 6. Complete the First Time Setup. 7. Open the main supply valve. 8. Initiate an immediate regeneration to move the control into the BACKWASH position. 9. Refer to the section on manual cycling for information on cycling the control through its positions. 10. When in the **BACKWASH** position, slowly rotate the bypass to the soft water position until water flows. 11. Allow the tank to fill slowly until water flows from the drain line. 12. When flow to drain is established, open the bypass fully. Watch the drain line discharge for signs of resin. If signs of resin particles appear, reduce the flow. Increase the flow again when resin no longer appears in the discharge. 13. After the BACKWASH runs clear, step the control to the REFILL position to fill the brine tank and purge air from the brine line. 14. Complete the installation and cleanup. 15. Sanitize the unit as you leave the installation site. See "Sanitizing Procedure" on page 44. 16. Initiate an immediate regeneration, or set to regenerate at the preset time.

Final Startup

Recommended Aqua-Sensor® Start-Up Procedure

NOTE You might find it useful to pre-test the sensor probe in your shop. The same test setup can be used in the field.

- 1. Close the main water supply valve.
- 2. Install the sensor probe into the tank but do not connect the sensor to the control at this time.
- 3. Set the Cul-Flo-Valv® to the BYPASS position.
- 4. Ensure that all faucets at the installation site are closed.
- 5. Direct the drain line discharge into a bucket where flow can be observed.
- 6. Plug the transformer into a 120 Volt, 60 Hz, single-phase receptacle (make sure to connect both 24V and 2.5V properly).
- 7. Complete the FIrst Time Set-up.
- 8. Open the main supply valve.
- 9. Initiate an immediate regeneration to move the control into the BACKWASH position.
- 10. Refer to the section on manual cycling for information on cycling the control through its positions.
- 11. When in the **BACKWASH** position, slowly rotate the bypass to the soft water position until water flows.
- 12. Continue **BACKWASH** until the drain effluent is clear and the Aqua-Sensor probe is placed in the resin bed—at least 10 minutes (use a white foam coffee cup to occasionally collect a sample of backwash water; the stark white of the cup will show the presence of color throw and resin fines).
- 13. Continue or repeat the **BACKWASH** cycle if needed.
- 14. After the backwash water runs clear, step the control to the **REFILL** position to fill the brine tank and purge air from the brine line.
- 15. Unplug the control and connect the sensor to the circuit board.
- Reconnect the power and INSTALL the Aqua-Sensor Probe (Main Menu/ Accessories/ AquaSensor)
- 17. Check the condition of the Aqua-Sensor (Main Menu/ Diagnostics/ Checksensors)
- 18. Press the Program key and program the control to the desired settings.
- 19. Complete installation and cleanup.
- 20. Sanitize the unit as you leave the installation (see "Sanitizing Procedure" on page 44).
- 21. Initiate an immediate regeneration.

The thorough backwashing process should have cleared the fines and color-throw from the tank. The probe should settle into the resin bed during the first couple of minutes of backwashing.

Salt Supply,

Usage and

Service

Salt is the mineral used to "recharge" your water conditioner. A brine solution is automatically made up in the bottom of the salt storage container, the Cullex® resin beads in the mineral tank are flushed with the brine solution as a step in the recharging process.

Your Culligan Water Conditioner has been carefully designed to get the greatest amount of softening capacity from the salt it uses. Here is some pertinent information about salt usage, types and service.

Salt Economizer

This control is set at the time of installation, and determines salt usage according to the water hardness, number of persons in the household, and water usage.

What Kind of Salt is Best

All Culligan Water Conditioners are designed to use any water conditioner salt of good quality, including rock, pellet, solar, or "evaporated" types.

All rock salt, regardless of source, contains insoluble material which collects at the bottom of the salt storage tank and requires periodic clean-out.

If purified salt products are used, the salt storage compartment will require less frequent clean-out, but you must check more frequently for "bridging."

Regardless of what type of salt is used, we recommend Culligan Brand Salt as suggested by your Culligan Dealer. He or she is the expert and can provide you with the best product for your Culligan Water Conditioner.

Automatic Salt Delivery Service

Ask your Culligan Dealer for details about salt delivery service. You can have your salt supply replenished on a regular basis. Whether you have automatic delivery service or pick up salt from your Culligan Dealer, you will be getting quality salt packaged according to rigid Culligan specifications. Using Culligan Brand Salt will help assure continued efficiency and trouble-free operation of your water conditioner.

The modem allows for the system to be remotely monitored, detecting problems before they occur, to schedule salt delivery when it is needed and to keep the system software up to date with the latest advances.

NOTICE Sodium Information: Water softeners using sodium chloride for regeneration add sodium to the water. Persons who are on sodium restricted diets should consider the added sodium as part of their overall sodium intake.

Care and Cleaning of Your Water Conditioner

Following these simple precautions will help assure continued trouble-free service and keep your Culligan Water Conditioner looking like new for years.

- 1. Do not place heavy objects on top of the salt storage tank or timer cover.
- Use only mild soap and warm water when cleaning the exterior of the conditioner. Never use harsh, abrasive cleaning compounds or those which contain acid, such as vinegar, bleach and similar products.
- 3. Important: Protect your water conditioner and the entire drainline from freezing temperatures.

WARNING! DANGER: If your unit should freeze, do not attempt to disassemble it. Call your Culligan Dealer.

- 4. Important: Culligan water softeners are sold for use on potable water only. If at any time the water becomes contaminated, such as during a "boil water" advisory, the operation of the water softener should be discontinued until it is verified that the water is again potable. To do this, turn the blue knob in a clockwise position, then call your Culligan dealer to have your system sanitized before it is placed back into service.
- 5. Should service, adjustment or trouble-shooting information be needed which is not covered in the Use and Care Guide, call your Culligan Dealer.

For parts and service availability please call your local independently operated Culligan dealer. For your nearest Culligan dealer, call (800) 285-5442.

Recommended Preventative Maintenance Inspection Schedule

The Culligan High Efficiency household water softener has been designed to provide a good, consistent service life. Routinely inspecting the system may help avoid potentially costly breakdowns related to circumstances outside of the control of the dealer and/or user.

Component	Suggested Inspection Frequency	Reason for Maintenance
Entire System	At Start-up, after infrequent use (idle for one week or more) or every 3–6 months.	On private supplies, the appearance of off-tastes and odors, particularly if musty or "rotten egg" (caused by harmless sulfate-reducing bacteria) may indicate a need for the system to be sanitized. See page 48.
Backwash Flow Controller	Every 12 months or every time service is performed on the system.	Build up of sediment, iron and/or other foreign materials (found in some water supplies but not necessarily all) could negatively affect system performance. Monitor item for normal or unexpected wear.
Brine eductor noz- zle and throat	Every 12 months or every time service is performed on the system.	Build up of sediment, iron and/or other foreign materials (found in some water supplies but not necessarily all) could negatively affect system performance. Monitor item for normal or unexpected wear.
Softening Media (Cullex)	Every 2–3 years	Chlorinated water supplies can breakdown and de- stroy resin material. Resin material may also perform poorly if subjected to other materials (sediment, iron, alum, etc.) found in some water supplies (but not necessarily all).

A periodic clean-out of the Salt Storage Tank is necessary to keep your Culligan Water Conditioner at peak operating efficiency. Do it at least every two years when the salt supply is low. Follow these step-by-step procedures:

Tools Needed

- Scoop
- Clean, bucket-size container
- Garden hose
- Household scrub brush or sponge

Procedure

- 1. Remove the salt storage tank cover and the cap from the brine valve chamber.
- 2. Lift the brine valve out of the brine valve chamber and set aside in an upright position.
- 3. If you'd like to save any clean, dry salt remaining in the tank, remove it and place it in a clean container.
- 4. Using the scoop, dig out and discard as much remaining salt, water and debris as possible.
- 5. Remove the brine valve chamber by removing the screws on either side of the salt tank.
- 6. Remove the salt plate at the bottom of the brine tank.
- 7. Lay the salt tank on its side and direct a brisk stream of water from your garden hose to its inside to rinse out all residue.
- 8. Using a household scrub brush and a mild soapy solution, clean the salt plate. This will complete the tank cleaning.
- 9. Insert the brine valve into the chamber and replace brine valve chamber cap.
- 10. Fill the salt storage tank with 4 to 6 inches of water.
- 11. Fill the tank with salt to within a few inches of the top.
- 12. Replace salt storage tank cover.

Cleaning Out the Salt Storage Tank

Sanitizing Procedure

A water softener in daily use on a potable water supply generally requires no special attention other than keeping the salt tank filled. Occasionally, however, a unit may require sanitization under one of the following conditions:

- At start-up time.
- After standing idle for a week or more.
- On private supplies, the appearance of off-tastes and odors, particularly if musty or "rotten egg" (caused by harmless sulfate-reducing bacteria).

NOTE If the water supply contains iron, regenerate the softener before sanitizing to remove iron from the resin.

CAUTION! Caution! Hazard from toxic fumes! Chlorine bleach and common iron control chemicals may generate toxic fumes when mixed.

If the unit uses Culligan Sofner-gard® or other compounds containing sodium hydrosulfite, sodium bisulfite, or any other reducing agent, disconnect the device feeding the chemical(s) and manually regenerate the unit before sanitizing.

Do not use this procedure if the softener salt contains iron control additives.

- 1. Remove the brine tank cover.
- 2. Pour directly into the brine chamber 1/3 to 1/2 cup of common household bleach (5.25% sodium hypochlorite) for each cubic foot of resin in the tank.
- 3. Manually start recharge. Allow the unit to complete the recharge cycle automatically.

If tastes and odors return frequently, even after sanitization, a continuous chlorination system may be needed. Send a water sample to a qualified laboratory for bacterial analysis.

If you unexpectedly experience changes in your water, make these simple checks before calling your Culligan dealer. One of the following conditions may be the reason for your interruption of service.

Important

If any of the following conditions is found, the water softener should be manually regenerated according to instructions on page 38 after you have corrected the problem.

Power Supply

Check your power supply cord. Is it plugged fully into the electric outlet? Be certain that the outlet is not controlled by a wall switch which has been turned off. Plug in the transformer then reset conditioner to the correct time of day.

Blown Fuse

Check the house fuse or circuit breaker panel. Replace a blown-out fuse or reset an open circuit breaker.

Power Failure

Any interruption in your power supply or time change—such as daylight savings—will disrupt your softener's regeneration schedule by causing the timer to run off-schedule. Reset the timer to the correct time of day.

Bypass Valves

Check to see if they are in the proper position. Cul-Flo-Valv[®] Bypass, if used, should be in the "Service" position (see page 37). If hand valves are used, see that inlet and outlet valve are opened and that the bypass valve is closed.

No Water

If you aren't getting any water flow at all, make sure your water supply is working. Open a tap ahead of the conditioner (outside tap) to see if you have any water pressure. If you have water pressure, check the bypass valve. If it is in the Service position, put it into the bypass and call your Culligan dealer for service.

Increased Usage

Guests, family additions, new water-using appliances, etc., will result in more water usage and will require more capacity from your softener. You can reprogram your regeneration schedule by following the directions beginning on page 37. Call your Culligan dealer for advice and save a service call. Things to Check Before You Call for Service

Error Codes

The controller display, as well as the Remote Display (if connected), may display the following errors.

PROBLEM FOUND APR-01-12 10:01A
REPLACE FILTER MEDIA

->CLEAR ERRORS

- When the controller identifies an error, it is programmed to attempt to correct the error without user input. If the problem persists, the HOME SCREEN displays PROBLEM FOUND. Press to display the first error present.
- 2. Press 👽 to display any additional errors present.
- 3. Press and to view action: **CLEAR ERRORS**, **GO TO MENU**, or **EXIT**. If you select **CLEAR ERRORS**, the controller checks the error status and attempts to clear the error. If the error still exists, the home screen displays **PROBLEM FOUND**. If the error no longer exists the screen displays **SYSTEM OK**.

>GO	то	MENU

4. Press V to select CLEAR ERRORS, GO TO MENU, or EXIT.

Error Reason for Error		Comment/ Clearing Error Message		
Salt Bridging	Brine tank has low concentration of brine but still appears to have solid salt.	Use a tool to break up any salt bridge inside the brine tank		
No Remote Main board is not receiving a signal from the remote.		Remote is off, out of range or on a different channel from the main board. If interference is suspected, try moving the remote closer or switching to a different channel on both the main and remote units		
Motor Home Err	Motor did not move when it should. The control home position could not be found.	Contact your Culligan dealer.		
Brine Blocked	The flow rate of brine or water to or from the brine tank is fully or partially blocked.	Check brine line for blockages or air leaks. Check eductor and eductor screen for blockages		
Replace Ext Filt Total gallons through the secondary filter (i.e. "Big Blue" filter) has exceeded the specified ca- pacity of the Big Blue.		Replace optional filter cartridge. Reset the external filter me- dia life at Main Menu/ Accessories/ Ext. Filter menu		
Check Brine Tank Aqua-Sensor did not detect brine during the re- generation cycle.		Check brine tank and add salt if necessary. Check Z ratio of the Aqua-Sensor at Main Menu/ Advanced / Diagnos- tics/ Sensors		
Call Culligan at xxx-xxx-xxxx	This message is displayed if an error has been detected that requires servicing and no modem installed in the system.	Call the number shown. If possible, place this call using a phone that will allow you to see and enter changes to the main controller if required by the service technician during the call		
Pos Sensor Err The motor is directed to run but no change in po- sition is detected.		Check the motor using manual motor control and the po- sition sensors using Main Menu/ Advanced/ Diagnostics Sensors		
Few Days Salt This is a prediction of the number of days until it will be necessary to add salt to the brine tank.		Salt can be added to the brine tank at any time. It is recommended that the brine tank be filled to approximately 2/3 full.		
Low Salt Level	Salt level is low; less than 15 days of salt remaining.	Contact Culligan dealer for salt delivery or fill brine tank with salt.		
Low Battery	Battery needs replacement.	Contact your Culligan dealer.		
Brine Overfill	Contact your Culligan dealer.	Contact your Culligan dealer.		
No Brine In Tank	Failed to refill brine tank. Refill restrictor plugged. Air in brine line causes float to slam shut.	Clean or replace refill restrictor. Verify all tubing connec- tions are properly assembled.		
Aqua Sens Probe	An Aqua-Sensor was "Installed" but main board detects the Aqua-Sensor is not connected.	Check connection of Aqua-Sensor to the main board.		

Normally, all water except outside lines passes through the water softener. There are times when the water softener should be bypassed, using the Cul-Flo-Valv[®] Bypass, or a three-way bypass valve. You should bypass:

- 1. If lines to outside faucets do not bypass the water softener, and you do not want to waste softened water on lawn sprinkling or other outside uses.
- 2. If you are going away on vacation and do not want the unit to recharge.

Bypass Valve

In the back of Culligan water softener is a Cul-Flo-Valv® Bypass valve. To bypass the unit, turn the blue knob clockwise. To return to softened water service, turn the blue knob counter-clockwise.

Figure 24. Bypass valve.

Bypassed

To BYPASS, turn the blue knob clockwise (see directional arrow on end of knob) until the knob stops as shown in Figure 1. DO NOT OVERTIGHTEN!

Figure 25. Service valve.

Softened Water

To return to SERVICE, turn the blue knob counter-clockwise (see directional arrow on end of knob) until the knob stops as shown in Figure 2. DO NOT OVERTIGHTEN!

When and How to Bypass Your Water Conditioner

Culligan High Efficiency 9" Water Softener with Soft-Minder® Meter Culligan knows the more informed you are about your water treatment systems, the more confident you will be about its performance. It's because of this and more than seventy years of commitment to customer satisfaction that Culligan is providing this Performance Data Sheet to its customers.

NOTICE Read this Performance Data Sheet and compare the capabilities of this unit with your actual water treatment needs. It is recommended that before purchasing a water treatment unit, you have your water supply tested to determine your actual water treatment needs.

Manufacturer: Culligan International Company 9399 W. Higgins Rd., Suite 1100, Rosemont, IL 60018 USA (847) 430-2800

Product: Culligan High Efficiency 9" Water Softener with Soft-Minder® Meter

Testing Conditions & Results:

			$c \sim 1$
Flow Rate:	9.0 gpm @ 11 psi	Capacity:	17,854 grains @ 4.0 lb. salt C
Pressure:	30-40 psi (2.1-2.8 kg/cm2)		27,108 grains @ 8.0 lb. salt
Acidity:	Non-Corrosive		31,736 grains @ 12.0 lb. salt
Temperature:	68°F (20°C)	pH:	7.6
Efficiency Rated Dosage†:	4,463 gr/lb		

Softener Specifications:

Service Flow Rate: 9.0 gpm Operating Temp. Range: 33–120°F (0–49°C) Working Press. Range: 20–125 psi (1.4–8.5 kg/cm²)

Pressure Drop at Max. Flow Rate: 11 psi Max. Drain Flow Rate: 2.5 gpm Oper. Press. Range (Canada): 20–90 psi (1.4–6.3 kg/cm²)

SA

Name of Substance	USEPA Max. Contaminant Level	рН	Flow Rate	Pressure
Barium	2.0 mg/L	7.5 + 0.5	9.0 gpm	11 (psig)
Radium 226/228	5 pCi/L	7.5 + 0.5	9.0 gpm	11 (psig)

This system is certified for barium and radium 226/228 reduction based on hardness reduction. It is recommended you test your water every 6 months to ensure the system is performing properly and that hardness, and therefore barium and radium 226/228, are being reduced. Hardness test strips have been included. Additional strips are available from your local Culligan dealer.

The Culligan High Efficiency Series 9" Water Softeners with Soft-Minder® Meter are tested and certified by WQA against NSF/ANSI Standard 372, CSA B483.1, NSF/ANSI Standard 44 for the effective reduction of hardness (calcium and magnesium), barium, and radium 226/228, as verified and substantiated by test data.

An efficiency rated water softener is a DIR softener which also complies with specific performance specifications intended to minimize the amount of regenerant brine and water used in its operation. Efficiency rated water softeners shall have a rated salt efficiency of not less than 3350 grains of total hardness exchange per pound of salt (based on NaCl equivalency) (477 grams of total hardness exchange per kilogram of salt), and shall not deliver more salt than its listed rating. The efficiency is measured by a laboratory test described in NSF/ANSI 44. The test represents the maximum possible efficiency the system can achieve. Operational efficiency is the actual efficiency achieved after the system has been installed. It is typically less than the efficiency due to individual application factors including water hardness, water usage, and other contaminants that reduce the softener's capacity.

Refer to the Specifications, Familiarization and Warranty section of this Owner's Guide for more specific product information. To avoid contamination from improper handling and installation, your system should only be installed and serviced by your Culligan Man. Performance will vary based on local water conditions. The substances reduced by this system are not necessarily in your water.

Culligan water softeners are designed to work with any salt of good quality, although it is recommended that you ask your local Culligan Man for his suggestion on the best type and grade of salt to use in this softener.

NOTICE This softener is not intended to be used for treating water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

^tThe efficiency rated dosage is only valid at the 4lb. salt dosage and maxmum service flow rate for 9" models.

Culligan knows the more informed you are about your water treatment systems, the more confident you will be about its performance. It's because of this and more than seventy years of commitment to customer satisfaction that Culligan is providing this Performance Data Sheet to its customers.

NOTICE Read this Performance Data Sheet and compare the capabilities of this unit with your actual water treatment needs. It is recommended that before purchasing a water treatment unit, you have your water supply tested to determine your actual water treatment needs.

Culligan High Efficiency 9" Water Softener with **Aqua-Sensor® Sensing Device**

USA

Culligan High Efficiency 10" Water Softener with Soft-Minder® Meter Culligan knows the more informed you are about your water treatment systems, the more confident you will be about its performance. It's because of this and more than seventy years of commitment to customer satisfaction that Culligan is providing this Performance Data Sheet to its customers.

NOTICE Read this Performance Data Sheet and compare the capabilities of this unit with your actual water treatment needs. It is recommended that before purchasing a water treatment unit, you have your water supply tested to determine your actual water treatment needs.

Softener Specifications:

Service Flow Rate: 9.4 gpm Operating Temp. Range: 33–120°F (0–49°C) Working Press. Range: 20–125 psi (1.4–8.5 kg/cm²) Pressure Drop at Max. Flow Rate: 12 psi Max. Drain Flow Rate: 2.0 gpm

Oper. Press. Range (Canada): 20–90 psi (1.4–6.3 kg/cm²)

Name of Substance	USEPA Max. Contaminant Level	рН	Flow Rate	Pressure
Barium	2.0 mg/L	7.5 + 0.5	9.4 gpm	12 (psig)
Radium 226/228	5 pCi/L	7.5 + 0.5	9.4 gpm	12 (psig)

This system is certified for barium and radium 226/228 reduction based on hardness reduction. It is recommended you test your water every 6 months to ensure the system is performing properly and that hardness, and therefore barium and radium 226/228, are being reduced. Hardness test strips have been included. Additional strips are available from your local Culligan dealer.

The Culligan High Efficiency Series 10" Water Softeners with Soft-Minder® Meter are tested and certified by WQA against NSF/ANSI Standard 372, CSA B483.1, NSF/ANSI Standard 44 for the effective reduction of hardness (calcium and magnesium), barium, and radium 226/228, as verified and substantiated by test data.

An efficiency rated water softener is a DIR softener which also complies with specific performance specifications intended to minimize the amount of regenerant brine and water used in its operation. Efficiency rated water softeners shall have a rated salt efficiency of not less than 3350 grains of total hardness exchange per pound of salt (based on NaCl equivalency) (477 grams of total hardness exchange per kilogram of salt), and shall not deliver more salt than its listed rating. The efficiency is measured by a laboratory test described in NSF/ANSI 44. The test represents the maximum possible efficiency the system can achieve. Operational efficiency is the actual efficiency achieved after the system has been installed. It is typically less than the efficiency due to individual application factors including water hardness, water usage, and other contaminants that reduce the softener's capacity.

Refer to the Specifications, Familiarization and Warranty section of this Owner's Guide for more specific product information. To avoid contamination from improper handling and installation, your system should only be installed and serviced by your Culligan Man. Performance will vary based on local water conditions. The substances reduced by this system are not necessarily in your water.

Culligan water softeners are designed to work with any salt of good quality, although it is recommended that you ask your local Culligan Man for his suggestion on the best type and grade of salt to use in this softener.

NOTICE This softener is not intended to be used for treating water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

[†]The efficiency rated dosage is only valid at the 6 lb. salt dosage and maxmum service flow rate for 10" models.

Culligan knows the more informed you are about your water treatment systems, the more confident you will be about its performance. It's because of this and more than seventy years of commitment to customer satisfaction that Culligan is providing this Performance Data Sheet to its customers.

NOTICE Read this Performance Data Sheet and compare the capabilities of this unit with your actual water treatment needs. It is recommended that before purchasing a water treatment unit, you have your water supply tested to determine your actual water treatment needs.

Manufacturer:	Culligan International Compar 9399 W. Higgins Rd., Suite 1 (847) 430-2800	iy 100, Rosemont, I	L 60018 USA
Product: Culligan	High Efficiency 9" Upflow Wate	er Softener with A	qua-Sensor® Sensing Device
Testing Condit	ions & Results:		NOUSTRY STATE
Flow Rate:	9.0 gpm @ 11 psi	Capacity:	9,792 grains @ 2.0 lb. salt C - US
Pressure:	30–40 psi (2.1–2.8 kg	/cm2)	17,366 grains @ 4.0 lb. salt
Acidity:	Non-Corrosive		27,306 grains @ 8.0 lb. salt
Temperature:	68°F (20°C)		-
Efficiency Rated Do	osage†: 4,896 gr/lb	pH:	7.6
Softener Speci	ifications:		
Service Flow Rate:	9.0 gpm	Pressure D	rop at Max. Flow Rate: 11 psi

Service Flow Rate: 9.0 gpm Operating Temp. Range: 33–120°F (0–49°C) Working Press. Range: 20–125 psi (1.4–8.5 kg/cm²) Pressure Drop at Max. Flow Rate: 11 psi Max. Drain Flow Rate: 2.5 gpm Oper. Press. Range (Canada): 20–90 psi (1.4–6.3 kg/cm²)

Name of Substance	USEPA Max. Contaminant Level	рН	Flow Rate	Pressure
Barium	2.0 mg/L	7.5 + 0.5	9.0 gpm	11 (psig)
Radium 226/228	5 pCi/L	7.5 + 0.5	9.0 gpm	11 (psig)

This system is certified for barium and radium 226/228 reduction based on hardness reduction. It is recommended you test your water every six months to ensure the system is performing properly and that hardness, and therefore barium and radium 226/228, are being reduced. Hardness test strips have been included. Additional strips are available from your local Culligan dealer.

The Culligan High Efficiency 9" Upflow Water Softeners with Aqua-Sensor® Sensing Device are tested and certified by WQA against NSF/ANSI Standard 372, CSA B483.1, NSF/ANSI Standard 44 for the effective reduction of hardness (calcium and magnesium), barium, and radium 226/228, as verified and substantiated by test data.

An efficiency rated water softener is a DIR softener which also complies with specific performance specifications intended to minimize the amount of regenerant brine and water used in its operation. Efficiency rated water softeners shall have a rated salt efficiency of not less than 3350 grains of total hardness exchange per pound of salt (based on NaCl equivalency) (477 grams of total hardness exchange per kilogram of salt), and shall not deliver more salt than its listed rating. The efficiency is measured by a laboratory test described in NSF/ANSI 44. The test represents the maximum possible efficiency the system can achieve. Operational efficiency is the actual efficiency achieved after the system has been installed. It is typically less than the efficiency due to individual application factors including water hardness, water usage, and other contaminants that reduce the softener's capacity.

Refer to the Specifications, Familiarization and Warranty section of this Owner's Guide for more specific product information. To avoid contamination from improper handling and installation, your system should only be installed and serviced by your Culligan Man. Performance will vary based on local water conditions. The substances reduced by this system are not necessarily in your water.

Culligan water softeners are designed to work with any salt of good quality, although it is recommended that you ask your local Culligan Man for his suggestion on the best type and grade of salt to use in this softener.

NOTICE This softener is not intended to be used for treating water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

[†]The efficiency rated dosage is only valid at the 2 lb. salt dosage and maxmum service flow rate for 9" models.

Performance Data Sheet

Culligan High Efficiency 9" Upflow Water Softener with Aqua-Sensor® Sensing Device

Culligan High Efficiency 10" Upflow Water Softener with Soft-Minder® Meter Culligan knows the more informed you are about your water treatment systems, the more confident you will be about its performance. It's because of this and more than seventy years of commitment to customer satisfaction that Culligan is providing this Performance Data Sheet to its customers.

NOTICE Read this Performance Data Sheet and compare the capabilities of this unit with your actual water treatment needs. It is recommended that before purchasing a water treatment unit, you have your water supply tested to determine your actual water treatment needs.

<u>Tr</u> Manufacturer:	ademark/Model Designation High Efficiency 14" Aqua-Sensor High Efficiency 14" Soft-Minder Culligan International	Replacement Elements Meter
The water treatm 116830 of the Her <u>Microbiological</u> <u>Organic Contan</u>	ent device(s) listed on this certific of the and Safety Code for the follow <u>Contaminants and Turbidity</u>	cate have met the testing requirements pursuant to Section wing health related contaminants: <u>Inorganic/Radiological Contaminants</u> Barium Radium
Rated Service	Capacity:	Rated Service Flow: 10.6 gpm
Do not use wher certified for cyst	e water is microbiologically unsat reduction may be used on disinf	fe or with water of unknown quality, except that systems ected waters that may contain filterable cysts. IFOR

California Department of Public Health Certificate

Culligan High Efficiency 14″ Water Softener

Important Data on Your Water Filter

It is advisable to have the salesperson or installer fill in the information below for your future reference. If this has not been done, please ask for it, as it is necessary if you contact your dealer.

Identification

Model Name	Catalog No	
Control Model No.	Control Serial No	
Date of Installation	Tank Serial No	
Settings Time of Recharge:	a.m. /	p.m.
Regeneration Interval		days
Number of people in household		
Tank Size		inches

Water Analysis

Total Hardness	(gpg)
Total Iron	(ppm)
pH (acidity)

Culligan High Efficiency Automatic Water Conditioners

You have just purchased one of the finest water conditioners made. As an expression of our confidence in Culligan International Company products, your water conditioner is warranted to the original end-user, when installed in accordance with Culligan specifications, against defects in material and workmanship from the date of original installation, as follows:

For a period of ONE YEAR	The entire conditioner and Culligan HE Municipal Media
For a period of FIVE YEARS	Remote display, modem, Soft-Minder® meter, Smart Brine probe, or Aqua-Sensor® probe, if so equipped.
For a period of TEN YEARS	High Efficiency circuit board, control valve body, excluding inter- nal parts.
	The salt storage container, brine valve and all its component parts
For the LIFETIME of the	The Quadra-Hull™ conditioner tank and the Cullex® resin

original consumer purchaser

If a part described above is found defective within the specified period, you should notify your independently operated Culligan dealer and arrange a time during normal business hours for the dealer to inspect the water conditioner on your premises. Any part found defective within the terms of this warranty will be repaired or replaced by the dealer. You pay only freight from our factory and local dealer charges.

We are not responsible for damage caused by accident, fire, flood, freezing, Act of God, misuse, misapplication, neglect, oxidizing agents (such as chlorine, ozone, chloramines and other related components), alteration, installation or operation contrary to our printed instructions, or by the use of accessories or components which do not meet Culligan specifications, is not covered by this warranty. Refer to the specifications section in the Installation and Operating manual for application parameters.

Our product performance specifications are furnished with each water conditioning unit. TO THE EXTENT PERMITTED BY LAW. CULLIGAN DISCLAIMS ALL IMPLIED WARRANTIES, INCLUDING WITHOUT LIMITA-TION WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR PURPOSE; TO THE EXTENT REQUIRED BY LAW, ANY SUCH IMPLIED WARRANTIES ARE LIMITED IN DURATION TO THE ONE-YEAR PERIOD SPECIFIED ABOVE FOR THE ENTIRE CONDITIONER. As a manufacturer, we do not know the characteristics of your water supply or the purpose for which you are purchasing a water conditioner. The quality of water supplies may vary seasonally or over a period of time, and your water usage rate may vary as well. Water characteristics can also differ considerably if your water conditioner is moved to a new location. For these reasons, we assume no liability for the determination of the proper equipment necessary to meet your requirements, and we do not authorize others to assume such obligations for us. Further, we assume no liability and extend no warranties, express or implied, for the use of this product with a non-potable water source. OUR OBLIGATIONS UNDER THIS WARRANTY ARE LIMITED TO THE REPAIR OR REPLACEMENT OF THE FAILED PARTS OF THE WATER CONDITIONER, AND WE ASSUME NO LIABILITY WHATSOEVER FOR DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL, SPECIAL, GEN-ERAL, OR OTHER DAMAGES.

Some states do not allow the exclusion of implied warranties or limitations on how long an implied warranty lasts, so the above limitation may not apply to you. Similarly, some states do not allow the exclusion of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Consult your telephone directory for your local independently operated Culligan dealer, or write Culligan International Company for warranty and service information.

Culligan Limited Warranty

With Culligan You Get More Than A Quality Product

You Get Your Water Expert, The Culligan Man

We're here to provide you with fast, dependable service, making sure any problems you have are taken care of. The Culligan Man has been around for over seventy years, delivering quality products and dependable service all along. That's why people say "Hey, Culligan Man!®" Because we're the water experts. And that's who you want taking care of your water.

The Culligan Promise

At Culligan, we understand that a water quality improvement system is an investment in your family's well-being. That's why our 1,350 independently operated dealers worldwide don't just sell products; they sell water quality you can count on. We stand behind our products with written limited warranties and our unequaled Culligan service. No matter where you live, you can depend on Culligan expertise to work for you—today and tomorrow.
